

**With three grinding plants with proven vertical roller mill technology, LOESCHE continues to participate in the development of the Chinese cement industry**

**Many years of successful cooperation with Sinoma International Engineering ensured that the contract was again awarded to LOESCHE.**

*In the Schwarze Pumpe Power Plant, Germany, a LOESCHE Mill type LM 35.3 D is in operation*

**Bei Liu** – the Chinese Lubao Cement Company is currently having a new plant built for the production of cement clinker with a total daily capacity of 4,500 tons in Bei Liu, in the province of Guang Xi, in southern China. LOESCHE is contributing three vertical roller mills, one each for raw material, coal and clinker/slag.

One 4-roller mill with a capacity of 450 t/h will be used there for the grinding of cement raw material to a fineness of 12 % with a sieving residue of R 80 µm. Another LOESCHE mill with a throughput of 200 t/h is used for the subsequent grinding of cement clinker to a fineness of 3,400 to 3,600 Blaine. The other large 3-roller mill with a capacity of 42 t/h is used for the grinding of fuel coal to a fineness of 2 % and a sieving residue of R 80 µm.

LOESCHE's customer and general contractor at the new plant in Bei Liu is the engineering company Sinoma (Suzhou) Construction Co., Ltd. which belongs to the well-known Sinoma International Engineering Co., Ltd. and is a part of the important China National Building Material Group Corporation. Sinoma has been a part of the development of the Chinese cement industry for more than 50 years and in this time has already implemented 400 cement production lines, 60 of which are full EPC projects (Engineering, Procurement and Construction) in China as well as in other Asian and African countries. In relation to Sinoma and its related companies, LOESCHE has already made its contribution in the past with the delivery of a large number of vertical roller mills, the outstanding technology of which has now convinced
