This is the second order of a LOESCHE coal mill used in this group.

Jiaoling - At present, LOESCHE is delivering another two vertical roller mills for Guangdong Tapai Co., Ltd. for its two 10,000 t/d cement clinker production lines in Jiaoling, Meizhou, Guangdong Province. This is the second repeated order after two LM 35.3 D coal mills were purchased for a same scale production line of the company in 2015. Due to the excellent quality and advanced grinding technology of LOESCHE vertical roller mills as well as the good production conditions, the customer once again prefers to use LOESCHE mills for two new cement production lines to grind pulverized coal.

The 3-roller mill grinds 50 tph pulverized coal to a fineness of 3 % with a sieving residue of 0.08 mm. The installed power is 1200 KW.

Guangdong Tapai Co., Ltd. has grown rapidly in the cement industry. There are several large-scale cement clinker production lines in Guangdong, which have made great contributions to the development of the local building materials industry. This has already been reflected by two 10000 t/d cement production lines which were put into operation in 2017 and another two cement production lines of the same size to be built. The two newly ordered coal mills are expected to be fully delivered in April 2019.
